

SMARTTAG

STAND-ALONE REAL-TIME LOGGER

DATA
LOGGERS

The SmartTag is a stand-alone real-time tracking data logger used primarily for individual shipment monitoring, rather than acting as a gateway for other sensors.

It directly measures environmental parameters such as temperature, humidity, shock, light, and location, and transmits the data via cellular networks (e.g., LTE/5G) to cloud platforms such as ORCA Cloud for live visibility during transport.

Unlike SmartHub or SmartLock, which collect data from nearby TempBeacons, the SmartTag itself is the primary measurement and tracking device attached to a shipment, providing real-time monitoring without requiring additional beacon sensors.

Features

- Real-Time Temperature Monitoring
- Compact, wireless design for easy placement
- Automated data logging and reporting
- Long battery life for extended shipment coverage
- Instant alerts to enable rapid response to excursions
