

# LOGGER RENTAL

SMARTTAG AND SMARTHUB

DATA  
LOGGERS

**A rental service for SmartTag loggers offers a simple, all-in-one solution for shipment monitoring. As self-contained devices, SmartTags combine sensing, logging, and connectivity in a single unit, making them easy to deploy at scale while still delivering reliable temperature tracking and real-time visibility.**

For more complex or high-value shipments, SmartHub loggers, used alongside TempBeacon devices, provide a gateway-based solution designed for continuous, real-time monitoring. This setup enables live data transmission, aggregation across multiple sensors, and immediate alerts, supporting proactive intervention during transit.

By offering both options as a rental service, organisations can match the technology to the shipment: SmartTag for straightforward, scalable deployments, and SmartHub with TempBeacon for advanced, connected monitoring where deeper visibility and control are required.

## Features

- Flexible deployment model to meet your need
- All-in-one versus gateway-based solutions
- Real-time visibility and alerts
- Scalable for different shipment types
- Reduced operational complexity
